

INSTRUCTIONS:

Goal of the Project:

In Class 8, you reviewed the concepts from the previous classes and started to build the T-rex game.

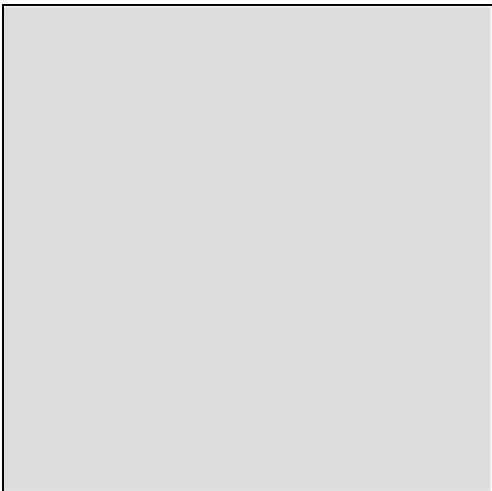

In this project, you will be designing your own game!

Story:

Every game has a few simple components...

The player playing the game should have a goal. It should give you obstacles to overcome. And it should offer you feedback on how you are doing in the game. Additionally, good games also have some story behind them.

With all these points in mind, design your own game with your own character, goals, obstacles, feedback and a story.

***This is just for your reference. We expect you to apply your own creativity in the project.**

Getting Started:

1. Login to code.org
2. Click on the following link: [Project Template](#)
3. Click on “**Remix**”.
4. Rename the project to **Project 8** and click on **Save**.

Specific Tasks to complete the Project:

1. Create the arena for your game.
2. Create the main character for your game.
 - Add controls for your character.
3. Create obstacles or challenges for your main character to reach their desired game goal.
4. Give feedback to the player - score, sounds etc.- to tell how they are doing in the game.
5. You can also build a story in your game.
6. Click on **Run** once to check if the code is working correctly.

Submitting the Project:

1. **SAVE** all the changes made to the project.
2. Click the "**SHARE**" button to generate a shareable link.
3. Copy this link and submit it in the Student Dashboard Projects panel against the correct class number.

REMEMBER... Try your best, that's more important than being correct.

After submitting your project your teacher will send you feedback on your work.
